CO-JACK

Rodent Control System

Carbon monoxide rich exhaust is cooled and passed through a vacuum pump for maximum volume and velocity.

(3) 50 ft. and (1) 100 ft. hoses mounted on swivel reels allow for high productivity and ease of use.

The compact and lightweight housing quickly attaches to a trailer for easy towing via truck, ATV or UTV.

Highly visible white smoke from vaporized mineral oil enables you to detect and plug connected tunnel openings.

For decades carbon monoxide has proven to be a safe and effective method for controlling rodent population. The addition of highly visible white smoke enables you to quickly detect and plug connected openings to seal in carbon monoxide gas and treat the entire tunnel network through a single opening.

SPECIFICATIONS

Engine 14HP Kohler	Fuel Unleaded Gasoline	Fuel Capacity 7 Gal	Mineral Oil Capacity 1 US Gal
Weight 1,360 LBS	Height 5' - 8"	Width 5' - 3"	Length 8' - 5"
Vacuum Pump Masport 112 CFM	Cooling System Finned Aluminum Tubing	Hose Length (1) 100', (3) 50'	Reels (4) Coxreels on 45° swivel
